Cross - Industry

Our Success stories

Intelligent Field Co-Pilot

A smart field assistant solution designed for field operators to access pertinent information regarding equipment and machine components. It utilizes Generative AI capabilities to offer responses to queries related to the specific machine and its context.

Intelligent Employee Co-Assistant

An intelligent HR assistant for employees enabling contextual access to comprehensive policy information. It leverages Generative AI capabilities to understand query intent and deliver responses derived from company policies and recommended actions based on employee transactions and profile data.

Intelligent Onboarding Assistant

A supplier onboarding aid for procurement teams, capable of automated extraction and summarization of data from documents, empowered by Generative AI capabilities. It conducts in-depth analysis of onboarding documents for every supplier and identifies potential risks in the process.
