Our Solutions & Customer success stories

Intelligent Field Assistant

A smart assistant solution designed for field operators to access pertinent information/insights regarding equipment and machine components. It utilizes Generative AI capabilities to offer multi-modal responses to queries related to the specific machine and its context.

Smart Order Automation

Intelligent Automation to streamline Orders coming through channels like emails. Process and interpret order intake from unstructured information in conversational emails, convert into required formats and post the order. Reduced manual effort and accelerating order fulfilment with required validation to handle exceptions.

Intelligent Onboarding Assistant

An onboarding solution, capable of automated extraction and processing of data from documents leveraging Generative AI capabilities. Conducts in-depth analysis of business documents based on given questions/criteria and gives a graded compliance rating for business to take a decision.

Sales Rep Assistant

A Sales assistant that intelligently analyses information (journal articles, technical specs) on products, processes and provides technical advice and product recommendations through human like conversations leveraging GenAI capabilities. Designed to assist Sales reps, facilitating efficient customer interaction informed decision making
