

Automate SAP PI/PO to Cloud Migration 2X Faster

A comprehensive, end-to-end solution for migrating from SAP and Non-SAP integration platforms (such as SAP PI/PO and WebMethods) to SAP BTP (SAP Integration Suite) and from Neo to Cloud Foundry. This Workbench minimizes risks, reduces costs, and ensures a smooth, successful cloud transition.

Key Benefits & Features

Seamless SAP PI/PO to Cloud Migration with End-to-End Automation

The Workbench automates the entire migration process, from connectivity setup to payload testing, significantly reducing manual effort and minimizing human errors. This ensures a reliable and efficient transition to SAP BTP.

Agile and Customizable Integration Flows

Customers can tailor integration flows using pre-built accelerators and customizable templates, ensuring optimal performance and seamless business alignment. This adaptability allows businesses to accelerate migration while maintaining consistency and achieving greater efficiency.

Optimized Efficiency with Adaptive Integration

By leveraging pre-built accelerators and templates, businesses can achieve a future-ready integration landscape that enhances scalability. The Workbench ensures seamless adaptation to evolving environments, reducing migration time and improving performance.

Real-Time Migration Status Tracking

The Workbench provides real-time visibility into the migration process, eliminating the need for manual tracking of Integration Configuration Objects (ICOs) and iFlows. This feature enhances efficiency, minimizes delays, and optimizes efforts, resulting in cost savings.

Proactive Monitoring with Real-Time Alerts & Error Handling

The alert and error-handling feature ensures proactive monitoring and rapid troubleshooting. Notifications via Mail, Slack, ServiceNow, and MS Teams keep businesses informed, enabling faster issue resolution and minimizing downtime.

Automated Testing & Payload Comparison

Post-migration validation is simplified with automated testing and payload comparison. Users can select multiple ICO and iFlow pairs, upload request and response files from SAP PO monitoring, and ensure the new iFlow functions as expected, reducing errors and enhancing reliability.

With the Workbench, businesses can accelerate SAP PI/PO to SAP Integration Suite migration while ensuring agility, efficiency, and long-term scalability.
