

Cherrywork WorkRules.AI is an AI-enabled platform designed to centralize and govern enterprise business rules across SAP and connected ecosystems. The platform combines intelligent rule discovery, human validation, conversational rule management, and continuous optimization to improve operational accuracy and agility.

Business Value

Operational Efficiency

- Reduces manual validations by up to 60–80%
- Enables sub-10ms decision latency
- Accelerates document approvals by 2–3X

Financial Impact

- Minimizes rework and process leakage
- Accelerates rollout across new geographies and business units
- Reduces audit preparation and resolution cycles

Compliance and Governance

- Ensures end-to-end rule traceability
- Reduces rule regressions and inconsistencies
- Improves monitoring with AI-assisted governance capabilities

Business Challenges Addressed

- Inconsistent execution of procurement, payroll, pricing, and compliance policies
- Business rules distributed across multiple systems and undocumented processes
- Frequent rule changes creating operational delays and audit risks
- Dependency on manual validations and tribal knowledge
- Limited visibility into rule conflicts, duplicates, and exceptions

Key Capability

Intelligent Rule Discovery

- Extracts rules from documents, policies, and enterprise data
- Identifies gaps, duplicates, conflicts, and hidden logic using AI
- Provides visual previews of discovered rules

Human-in-the-Loop Validation

- Enables business users to validate and refine AI-generated rules
- Supports confidence scoring and risk-based approvals
- Ensures governance and compliance

Conversational Rule Maintenance

- Create or modify rules using natural language prompts
- Eliminates dependency on code changes and transports
- Provides real-time impact analysis before deployment

Continuous Optimization

- Continuously monitors rule execution and outcomes
- Refines rule sets through AI-driven feedback loops
- Supports proactive governance and monitoring

Key Differentiators

- Unified AI-driven rule lifecycle management platform
- Combines enterprise data, documents, and human knowledge
- Conversational, low-code rule maintenance experience
- Continuous optimization with governance-first architecture
- Built to support SAP and connected enterprise landscapes
